a
Bifidobacterium breve
Bifidobacterium longum
normalized VOB x10^-5
arcsin-transformed abundance
Absent from sample
Present in sample
b
Relative Importance for RF
-log(p) for LM coefficients
Negative ass. with VOB
Positive ass. with VOB
Removed from LMs by abundance filter
> 60% ranked importance in RF and q < 0.2 in LM
> 60% ranked importance in RF
Not important or significant
c
d
Maternal Unpredictability
Infant VOB
Unique effects models
Menaquinone synthesis
Butyrate synthesis
Tryptophan synthesis
GABA synthesis
z statistic
q < 0.2, set median < effect median
q < 0.2, set median > effect median
not significant
effect median z
e
Interaction term
Interaction models
Glutamate synthesis
Acetate synthesis
Quinolinic acid degradation
f
Genus proportion/contribution
Bifidobacterium
Bacteroides
Escherichia
Klebsiella
Enterococcus
Other
Acetate synthesis
Butyrate synthesis
GABA synthesis
Glutamate synthesis
Menaquinone synthesis
Quinolinic acid degradation
Tryptophan synthesis
